Geometric mean is a statistical/mathematical term that is applied in many other areas outside of health care. This is calculated by multiplying all of the lengths of stay and then taking the nth root of that number (where n=number of patients). (Minimizes the impact of outliers)

The Case Mix Index (CMI) is the average relative DRG weight of a hospital's inpatient discharges, calculated by summing the Medicare Severity-Diagnosis Related Group (MS-DRG) weight for each discharge and dividing the total by the number of discharges.
