

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SONOMA VALLEY HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106491076
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	01/21/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.sonomavalleyhospital.org/quality/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

12008

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	9929	12008	82.7
Spanish Language	1989	12008	16.6
Asian Pacific Islander Languages	suppressed	12008	suppressed
Middle Eastern Languages		12008	
American Sign Language	suppressed	12008	suppressed
Other Languages	suppressed	12008	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

655

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

683

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

95.9

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	15	2	10	1.5
Housing Instability	19	3	14	2.1
Transportation Problems	19	3	11	1.7
Utility Difficulties	suppressed	suppressed	suppressed	suppressed
Interpersonal Safety	suppressed	suppressed	suppressed	suppressed

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

NA

Total number of respondents to HCAHPS Question 19

NA

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

NA

Total number of people surveyed on HCAHPS Question 19

NA

Response rate, or the percentage of people who responded to HCAHPS Question 19

NA

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

NA

Total number of respondents to HCAHPS Question 17

NA

Percentage of respondents who responded "yes" to HCAHPS Question 17

NA

Total number of people surveyed on HCAHPS Question 17

NA

Response rate, or the percentage of people who responded to HCAHPS Question 17

NA

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

58

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

501

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

11.6

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	11.4	1

Plan to address disparities identified in the data

After applying the CalHHS Data De-identification guideline, one disparity was identified:ð

Every calculation associated with all report fields has been evaluated for our hospital. While this AB 1204 Equity Report may appear sparsely populated and lacking values in some areas, this reflects the complexity of the reporting requirementsâ??not a deficiency in the report itself. The report incorporates the required calculations, stratifications, and the stateâ??s strict data privacy rules (including suppression under the California DDG), ensuring that it meets legal standards and equity reporting regulations.ð

Many blank cells are the result of limited availability of certain stratification variablesâ??particularly Disability Status, Sexual Orientation, and Gender Identityâ??which hospitals are not currently required by HCAI to collect. Our hospital remains committed to advancing equity reporting and looks forward to additional regulatory guidance on whether and how these data elements should be collected in the future.ð

Even when the final numbers are few, the work behind them is substantialâ??and necessary for accurate and compliant reporting.ð

ð

SVH data show women have higher all-cause, unplanned 30-day hospital readmission rates than men (rate ratio >1.0). The data showed that 100% readmitted patient's race is white. Sonoma Countyâ??s older median age and womenâ??s longer life expectancy increase frailty and multimorbidity riskâ??both linked to readmissions. Women also face clinical differences (cardiac, pulmonary, surgical courses), mental health burden, and social vulnerability (caregiving, lower income, transportation gaps), which impede recovery. Local Community Health Assessments confirm economic and access disparities affecting post-discharge success. If women disproportionately face gaps in these supports, their readmission share will rise. Public health and health-equity guidance stress addressing SDOH in readmission reduction. If discharge instructions, medication reconciliation, or follow-up scheduling donâ??t account for literacy, language, work/caregiver schedules, or mobility limitations, women who disproportionately shoulder caregiving or have constrained schedules may be less able to meet post-discharge requirements. SVH already tracks readmissions and posts equity data â?? this is the right place to dig deeper. To address the disparity, Standardize teach-back, ensure medication reconciliation with a pharmacy call within 48â??72 hours, schedule follow-up appointments before discharge (or provide nurse navigator outreach), and provide written + bilingual instructions. EHR-based interventions and post-discharge phone/visit programs have reduced readmissions in RCTs/meta-analyses; Implement a brief SDOH screening (transportation, food insecurity, caregiving, housing instability) and provide targeted referrals (transport vouchers, community health worker follow-up, home health); Deploy targeted transitional care for high-risk women through collaboration with home health workers, social services and insurer's case management and social work teams; and Add sex-stratified readmission KPIs to the Board quality dashboard (30-day readmit rate by sex, adjusted for age and diagnosis), and set reduction targets with PDSA cycles. SVH already publishes health equity materials â?? use those channels to report progress publicly.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Sonoma Valley Hospital prioritizes person-centered care by ensuring that every patient's discharge experience is safe, understandable, and tailored to individual needs. We have standardized teach-back at discharge and provide bilingual written instructions to ensure patients and caregivers understand medication regimens, warning signs, and follow-up plans. Medication reconciliation is completed prior to discharge, and Case Management identifies patients who may face financial challenges in affording their medications. For those unable to secure coverage before discharge, the hospital offers a charity medication program. Additionally, SVH has partnered with a local pharmacy to deliver medications to the bedside prior to discharge when transportation barriers are identified. We schedule follow-up appointments before discharge or provide nurse navigator outreach within 48 hours to reduce gaps in care continuity. A brief SDOH screen identifies barriers such as transportation, food insecurity, caregiving, and housing. Patients with identified needs receive targeted referrals, including transport vouchers, community health worker support, and home health services. High-risk women with cardiac, pulmonary, or surgical conditions receive customized transitional care bundles, such as wound care education, COPD/CHF discharge plans that identify signs and symptoms of an impending exacerbation, and behavioral health linkage. Our customized survey questions which reflect the domain: Personal Issues Addressed rate was 89.40% (individual questions were: Staff concern for privacy, How well pain was addressed, Staff addressed emotional needs, Response to concerns/complaints, Staff include decisions re:treatment)

Patient safety

We review and report patient safety measures monthly. During 2024, our PSI 90 was 0 per 100 patient days. The acute fall rate was 2.94 per 1,000 patient days (5/8 female 62.5%, 3/8 male 37.5%), with injury occurring in 1.1% of cases (2/3 female). Two healthcare-associated infections (C. difficile) were reported to NHSN. SVH achieved zero CLABSI and CAUTI for 12 consecutive months in ICU and med-surg units. Patients diagnosed with sepsis are reviewed monthly for bundle compliance and to identify opportunities for improvement.

Addressing patient social drivers of health

In 2024 we screened 95.9% of our inpatients for SDOH Pillars (Utilities, Housing, Transportation, Finances & Food.) Of the patients with positive screens, Transportation, Housing and Food Insecurity were the top challenges identified. A brief SDOH screen identifies barriers such as transportation, food insecurity, caregiving, and housing. Patients with identified needs receive targeted referrals, including transport vouchers, community health worker support, and home health services.

ð

In 2025, we implemented a Bedside Delivery Program by partnering with a local pharmacy to ensure patients leave with all prescribed medications, reducing the likelihood of missed doses. This program works alongside our charity medication program for patients unable to secure coverage prior to discharge. We provide bilingual discharge instructions in Spanish to ensure language access for non-English speakers and utilize a telehealth language interpretation program to support patients with limited English proficiency.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Overall, 30-day readmission diagnoses were as follows: COPD at 7.10% (2/28 â?? both women), CHF at 13.50% (5/37 â?? 4 of 5 were women), and Sepsis at 0.03%. SEP-1 early bundle compliance averaged 80%, with 50% of those cases involving women. SDOH screening to identify social barriers impacting safe recovery (transportation, housing, food insecurity) is completed for all admitted patients.ð

In June 2025, we implemented a Readmission Reduction Program that included pharmacy, registered dietitian, case management, social work, physicians, respiratory therapy, quality, age-friendly APN, and nursing representatives. During multidisciplinary rounds, each patient is discussed, and those identified with CHF and COPD are added to a list for focused care. Each discipline provides education to the patient and family on disease management.ð

We also established a collaboration with community SNF partners to share information aimed at improving care and reducing readmissions. The results of these programs are still pending to determine effectiveness. The data showed that 100% of readmitted patients were White.

Care coordination

Seventy-five percent of readmitted women were either widowed, divorced, or single. The data showed that 100% of readmitted patients were White. Case Management works closely with the patient and family, when available, to coordinate care for a safe discharge. Case managers schedule any necessary follow-up appointments, coordinate with skilled nursing facilities, rehabilitation facilities, home health, palliative care, and insurance care management teams. Additionally, SVH has partnered with a local pharmacy to deliver medications to the bedside prior to discharge when transportation barriers are identified.

Access to care

We schedule follow-up appointments before discharge to reduce gaps in care continuity. A brief SDOH screen is completed to identify barriers such as transportation, food insecurity, caregiving, and housing. Patients with identified needs receive targeted referrals, including complimentary Lyft/Uber rides, community health worker support, and home health services.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
